

LLC Miscanthus Technology

Miscanthus Technology is a joint venture of 2 entities – a developer of renewable energy projects and an agricultural company – each having sufficient expertise and significant experience in their respective areas, which is a perfect match for this project.

Our goal is to establish a 2500 ha commercial plantation of Miscanthus within 5 years, using degraded and marginal lands, with further biomass processing into a value-added product.

COOPERATION AREAS:

Feasibility study;

Logistics (customs, phytosanitary dept.);

Consulting services (incl. drafting schedules and agronomic advisory depending on region of planting);

Rhizomes storage/delivery to a plot;

Turnkey plantation establishment.

Ways to use Miscanthus to facilitate recovery of Ukraine:

- 🌿 Burning of CO₂-neutral biomass for heat and power production;
- 🌿 Manufacture of building materials and furniture (biomass-based concrete/plastics, HDF/MDF, insulation in construction);
- 🌿 In agriculture (soil mulching, bedding for livestock, as a fiber source in pet food);
- 🌿 Manufacture of eco-friendly packing, paper, carton, disposable tableware;
- 🌿 Carbon credits/certificates prospect.
